

Sage CRM for iPhone 2.1

Release Notes

Updated: May 2018

System requirements

Sage CRM for iPhone requires one of the following:

Device	Operating system
iPhone	<ul style="list-style-type: none">• iOS 11• iOS 10.x
iPad	<ul style="list-style-type: none">• iOS 11• iOS 10.x

Note: Sage supports only the latest version of the app (Sage CRM for iPhone 2.1).

New features and enhancements

- **Improved, faster data sync.** When you perform an initial data sync, the app downloads only those records that you selected in the app settings which enables the sync to complete faster. Also when you rerun data sync after an error, the app resumes the sync from the point where it stopped.
- **View communication subject.** The app now displays the subject of each communication linked to a contact.
- **View the number of records to sync.** When you click **Download Data**, the app shows the number of records to sync.

Addressed issues
